### **DETAILED ACTION**

1. Claims 1, 3-11, and 13-26 are pending.

#### ***Drawings***

2. This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

#### ***Allowable Subject Matter***

3. Claims 1, 3-11, and 13-26 are allowed.

The following is an examiner's statement of reasons for allowance:

4. The present invention teaches a method of permitting access to selected information normally included in a payload of a packet by placing that data in the header of a packet. Independent claims 1, 11, and 21-26 teach the unique feature of placing transport level information normally included in a payload of a packet in a field in a header of the packet where the field is not subject to encrypting security processing and having the transport level information be used for value added services. The closest prior art, Levesque et al US Patent No. 5,825,891, teaches the placing of transport level information in the form of a port number in the header of a packet, but fails to teach the providing of value added services based upon this addition (see Applicant's arguments

Art Unit: 2134

submitted 12/23/04 Page 15). Thus, the cited prior art fails to anticipate or render obvious the above-cited claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

6. Soirinsuo et al US Patent No. 6,084,855 teaches a method for providing fair traffic scheduling by placing a flow label in the header of packets that belong to a particular message stream.
